

In the realm of Trucking and Warehousing services, every edge you can get on your competition is crucial. With **idWhere-TW** your advantage is marked. Developed through many years of hands on experience in a variety of environments, your **idWhere-TW** software solution not only runs your day to day business but provides you with technical advancements in custom billing and reporting that sets you apart from your competition.

## Comprehensive Feature List

### General Features:

- Fully customizable for your particular business needs
- Oracle technology based on non-proprietary Oracle database
- Produce your own shipping labels (for customer logistics)
- Integrates directly with UPS and FedEx shipping stations
- Supports RF and batch portable data terminals
- Custom website design and integration of idwhere-TW
- Hardware and networking services

### Billing Features:

- Online ordering
- On-hand inventory lookup
- Warehouse receipts
- Product receivings
- Trucking and Warehouse order status
- Billing statements
- Pricing specific to duty paid and bonded product
- Supports Cube Billing, billing by weight and traditional per unit charges
- Integrated A/R system
- Complete billing/invoice integration with accounting packages
- Ability to generate shipping/out charges based on unit of measure
- Ability to filter out zero amount transactions (or not)
- For storage choose between annual, anniversary, monthly billing per product
- Ability to discount receipt storage charges by a percentage after a particular date
- Ability to discount receipt storage charges by a percentage within a certain number of days of the next storage period.
- Ability to discount by a percentage for a certain number of business days upon initial receipt of goods.
- Ability to define storage charges based on unit of measure
- Ability to define specific charges ie garbage, stripping, etc. per customer and associate these charges to a unit of measure when billing initial and renewal storage
- Bill logistics by flat rate, from-to, per unit or hundred weight while maintaining minimum and maximum amounts.
- Billings generated separately from invoices
- Automated initial and renewal storage charge generation through the use of a scheduler
- Automated or manual lot number generation (manual in the case of customer supplied lot number)

### EDI:

- Direct EDI integration.
- Thousands of mappings available.
- Fully supportive of 850s, 856s (ASNs), 810s, 997s, 870s, etc.
- Serialized bar-coding for the electronic delivery of 856s.

### Inventory Features:

- Tracking accurate to 3 units of measure
- Produce inventory reports accurate for any time range as of that date
- Fully supports bonded and duty paid product separately
- Lot traceability
- Complete lot history from initial receiving to final depletion of inventory
- Maintains complete audit trail of any billing related changes as well as warehouse transactions
- Warehouse receipts
- FIFO, LIFO and manual picking methods (utilizing ideal flow methodology for a given wave/batch/order number)
- Locate product by customer, your product#, customer product#, your customers customers product#, as well as by lot, receipt, shipper and customer reference #'s, container, etc.
- Ability to identify lockdown product, damaged product and product containing loose pieces
- Ability to place the same lot in many warehouse/bin locations
- Maintain unique notes per lot
- Maintains plus and minus of palettes and ability to bill accordingly

### Trucking Features:

- Percentage fuel charge per delivery
- Define delivery types by: inbound, rail, and zone container; straight and truckload delivery; loose and air-freight.
- Delivery sheets and Bills of lading
- Ability to search by: brokers and customers reference numbers, container, customer, and inventory order numbers
- Maintains container free time
